# GramVest

SIH 2026 • PS 26091

## Team Start Here - GramVest Implementation

Quick-start guide for the full team

### TEAM IMPLEMENTATION HANDBOOK

Prepared as a practical engineering guide for independent module development, stable integration, testing, and handoff.

Source basis: SIH 26091 Implementation Blueprint and the corresponding GramVest module  
Markdown handbook.

Contents

1 What this pack is for 1

2 Read in this order 1

3 Who reads what 1

3.1 M1 . . . . . 1

3.2 M2 . . . . . 1

3.3 M3 . . . . . 1

3.4 M4 . . . . . 1

3.5 M5 . . . . . 1

4 Team responsibilities at a glance 1

4.1 M1 — Frontend . . . . . 1

4.2 M2 — Backend . . . . . 1

4.3 M3 — GIS/Market . . . . . 1

4.4 M4 — Finance . . . . . 1

4.5 M5 — AI/RAG . . . . . 1

5 The simplest mental model 2

6 Common language 2

7 One hard rule 2

8 MVP priority 2

9 Final integration goal 3

## What this pack is for

This pack converts the SIH 26091 implementation blueprint into five practical module handbooks so that each developer can work independently and the team can combine the work without integration chaos.

The blueprint defines GramVest as a decision-support system that combines hyper-local market intelligence, competitor/opportunity analysis, deterministic financial structuring, scheme routing, risk analysis and a multilingual AI advisor. Its central journey is one continuous flow rather than disconnected features. [Source: SIH 26091 Implementation Blueprint, pp. 2–3]

## Read in this order

1. INTEGRATION\_PLAYBOOK.md — every member reads this first.
2. Your assigned module file.
3. TEAM\_START\_HERE.md again before integration week.

## Who reads what

### M1

M1\_Frontend\_User\_Journey.md

### M2

M2\_Backend\_Database\_API.md

### M3

M3\_GIS\_Market\_Competitor\_Opportunity.md

### M4

M4\_Finance\_Scheme\_Scoring\_WhatIf.md

### M5

M5\_AI\_RAG\_Risk\_Advisor\_DPR.md

## Team responsibilities at a glance

### M1 — Frontend

Turns structured results into a simple, usable product.

### M2 — Backend

Makes all modules communicate through stable APIs and database contracts.

### M3 — GIS/Market

Provides local evidence: geography, market reach, competitors, local gaps.

### M4 — Finance

Provides deterministic financial truth and scenario recalculation.

### M5 — AI/RAG

Explains verified evidence, grounds answers, manages knowledge and generates the report.

## The simplest mental model

## Common language

Use the same terms everywhere:

| Concept               | Shared wording           |
|-----------------------|--------------------------|
| Overall score         | Viability Score          |
| Market                | Market Intelligence      |
| Competitors           | Competitor Mapping       |
| Gap                   | Opportunity              |
| Finance               | Financial Engine         |
| Government/bank route | Indicative Scheme Route  |
| Scenarios             | What-If Simulator        |
| AI                    | AI Advisor               |
| Final PDF             | Feasibility Report / DPR |

## One hard rule

**No module invents another module's values.**

Example:

M1 must not invent EMI. M5 must not invent DSCR. M3 must not invent scheme eligibility. M4 must not invent competitor counts.

If a value is needed, request it through the agreed contract.

## MVP priority

The blueprint defines the following as MVP:

- location + business + capital input
- market reach estimate
- competitor map
- opportunity analysis
- SWOT + risk
- financial engine
- scheme router
- EMI + cash flow + DSCR
- viability score
- grounded AI advisor
- DPR/feasibility PDF
- What-If simulator

Voice, WhatsApp/SMS, offline-first, advanced forecasting, direct bank/API integrations, and long-term monitoring are later/differentiator scope unless the team has spare time.

## Final integration goal

The prototype is successful when a single user can complete:

Profile

- Location
- Business
- Market
- Competitors
- Opportunity
- Risk
- Viability
- Finance
- Financing Route
- AI Advisor
- What-If
- DPR

without a broken link, conflicting number, missing API, or inconsistent story.
